**Recruitment Team**

SAP SE

Waldorf, Germany

April 25, 2025

Dear Hiring Team,

I'm excited to apply for the Senior Typescript Engineer role at Supertab, where I can leverage my expertise in building application and software engineering to help customers.

I am a software developer with more than 8 years of experience. My focus is on building products based on web technologies. I am used to working on things that are outside my current area of expertise so I often have to acquire the necessary knowledge in a short period of time. I'm quite flexible with technologies and have gained a lot of experience working in different areas.

My main strength lay in frontend field developing web application with react ecosystem. But I also have solid production experience working with backend, cloud infrastructure, on-premises orchestration solution. My previous experience has given me a solid technical background, understanding of software development processes and communication skills. In my current position, I have worked with a variety of projects and domains with and without team members. I've held key developer positions and delivered several products to the MVP/first customer stage. In my previous project, besides from frontend responsibilities, I was also tasked to implement backend functionality using the same tech stack as in the job listing: pydantic, sqlalchemy, fastapi, postgresql. I also pushed for better management of api specification (openapi schema).

As an employee of a large software engineering services company, I want to continue to challenge myself and work on great products with long-term ownership over product or codebase.

Thank you for your time and consideration. I looking forward to speaking with you about this opportunity.

Sincerely,

Dmitrii Shikhaleev
